PROJECTS

PROJECTS (AICTE & Academic Projects)

Reverse Learning Platform (Top Project)

- Developed an AI-powered platform to analyze and explain incorrect answers in coding and MCQs.
- Leveraged NLP and LLMs to generate human-like explanations highlighting logical and conceptual errors.
- Built using Next.js (frontend) and Python backend for personalized, adaptive learning experience.

Nidana – Emotion Analysis Chatbot

- Built a Python & Flask-based chatbot using NLP and Naive Bayes for emotion detection.
- Delivered personalized responses based on user sentiment analysis.

Niyati – Career Intelligence Platform

- Designed an AI-driven recommendation system for personalized career guidance.
- Provided data-driven insights to support informed decision-making.

Enterprise Analytics

- Developed ML models for employee burnout prediction and wind-power forecasting.
- Focused on real-world data analysis and predictive insights.

CR – Next Generation Access

- Created a smart search platform integrated with Gemini API chatbot.
- Enabled intelligent query handling and enhanced user interaction.

Audio Scribe – Voice-Based Note Generator

- Built a voice-to-text note generator using IBM Watson Speech-to-Text.
- Automated lecture transcription and structured note generation.

Smart Recipe Finder

- Developed a lightweight app to suggest recipes based on available ingredients.
- Improved usability with simple and intuitive interface.

Car Lease & Contact Assistant

- Designed an assistant system to manage car leasing information and contact workflows.
- Streamlined user interaction and data handling processes.
